

The Interlink Difference

The difficulty and length of IT projects often grows in proportion with the number of vendors you use for them. The Interlink family of software and hardware eliminates these concerns by giving you a complete esignature platform. Our powerful technology lets you leverage all the advantages that esignatures provide – **efficiency, convenience, speed and security.**

Markets Served

Leading organizations in the following markets trust Interlink to automate their processes. In fact, 700 million esignatures are captured each year using Interlink technology.

- Auto Finance
- Banking
- eMortgage
- eNotarization
- Financial Planning
- Government
- Healthcare
- Insurance

Start eSigning with IntegriSign Desktop and ePad

IntegriSign Desktop is Interlink Electronics standard esignature software which comes bundled with every member of the ePad family of signature capture devices. Once your ePad is installed you're ready to esign!

ePad captures the handwritten electronic signature and securely transfers the data to the host computer. In turn, IntegriSign Desktop encrypts and permanently embeds the signature in the document, along with additional signature data such as date and time.

Capture a handwritten electronic signature with the IntegriSign Desktop and ePad family combination.

Although IntegriSign Desktop works out-of-the-box with Microsoft Word®, Excel® and Outlook® as well as Adobe® Acrobat®, the SDK can be utilized to develop custom applications that meet your organization's particular needs.

For added functionality and customization options, you can purchase Interlink's IntegriSign Pro. In addition to its Tablet PC support, IntegriSign Pro lets you create a secure signature stamp as well as offers support for third party digital certificates. Please see the chart below for an IntegriSign Desktop and IntegriSign Pro feature comparison.

Plug-ins	IntegriSign® Desktop	IntegriSign® Pro	SDKs	IntegriSign® Desktop	IntegriSign® Pro
Plug-ins for Adobe® Acrobat®, Microsoft® Word®, Excel® and Outlook®	■	■	COM/ActiveX SDK	■	■
